

Installing Diskeeper on Your Network

Diskeeper[®] performance software can be installed in a variety of ways. If you are installing Diskeeper onto a single computer, no special actions are needed. Simply double-click the Diskeeper installation file you downloaded on the target computer and complete the installation wizard steps.

If you are installing the software onto multiple computers in a network you have several options.

Option 1 - Using Diskeeper Administrator (Recommended)

- First, install Diskeeper Administrator edition. If you do not already have Diskeeper Administrator, you can download fully functional 45-day trialware from <u>http://www.diskeeper.com/downloads</u> and use the software – during the trial period – to quickly and easily deploy Diskeeper across your network. If you have more than 10-20 machines to which you plan to install software, Diskeeper Administrator will save you significant time.
- 2. After installing Diskeeper Administrator, return to the Diskeeper installation package file(s) you downloaded and double-click the *VLLanguageDiskeeperVersionProductEditionName*.exe file (this is a self-extracting file).

This will extract the Diskeeper software into the current folder, and if supported by the Diskeeper edition you are installing, subfolders will also be created and labeled **X86** (for Diskeeper running on Windows[®] 32-bit operating systems) and **X64** (for Diskeeper editions that natively support Windows 64-bit operating systems). When the extraction process is complete, you will see something similar to this:

The extraction process also extracts an Autorun.exe program which can be ignored. (It is only used for local system installations.)

3. After the files have been extracted, the installation will automatically start. When you are prompted to click **Next** to install, do not continue the process. Instead, select the option to cancel the installation (unless you want to also install the software on the local system).

🗒 Diskeeper 2010 Pro Premier - InstallShield Wizard 🛛 🛛 🛛		
	Welcome to the InstallShield Wizard for Diskeeper 2010 Pro Premier	
	The InstallShield(R) Wizard will install Diskeeper 2010 Pro Premier on your computer. To continue, click Next.	
Diskeeper 2010	WARNING: This program is protected by copyright law and international treaties.	
	< Back Next > Cancel	

4. To install Diskeeper with Diskeeper Administrator, you also need product license files corresponding to the Diskeeper edition(s) you are installing. License files (License.dal) can be downloaded from the same web location where you downloaded the Diskeeper software.

Order Number: M002010-10					
Company:Diskeeper Corporation PO#: M002010-10					
The following download(s) are complete packages with your license built-in. When prompted, click "Save". Once the file download(s) complete, open the downloaded file and install the product. We recommend downloading one file at a time.					
* If you are <i>not</i> using Diskeeper Administrator, the with the product.	"Admin Lic	ense" file is not necessary.	The license is bundled		
	Qty.	Click To Download	Diskeeper Admin License		
Diskeeper 2010 Professional Edition with HyperFast	1	Download	Diskeeper Admi License HyperFast License *		
Diskeeper 2010 Pro Premier Edition with HyperFast	1	Download	Diskeeper Admin License HyperFast License *		
Diskeeper 2010 Server Edition with HyperFast	1	Download	Diskeeper Admin License HyperFast License *		
Diskeeper 2010 EnterpriseServer Edition with HyperFast	1	Download	Diskeeper Admin License HyperFast License *		

Select the **Admin License** link, and when prompted, browse to the folder where you downloaded the Diskeeper installation package.

Note: You will need a separate License.dal file for each Diskeeper edition you are installing. These individual License.dal files must be saved in separate locations.

5. Launch Diskeeper Administrator and run the Add License Files wizard.

Browse to the License.dal file for each Diskeeper edition you plan to deploy. (These license files will be located in the folders you specified when you downloaded them.) The new License.dal file will update Diskeeper Administrator to the appropriate number of licenses for each edition, allowing you to then deploy Diskeeper across your network.

Note: To be able to browse to a folder on a remote machine, ensure the folder on the remote machine with the Diskeeper license and installation files is "shared".

6. Once your license files have been added to the Diskeeper Administrator database, run the Install Diskeeper wizard.

7. After selecting the Diskeeper edition, when prompted, browse to the respective **Setup.exe** file for that edition. (Keep in mind that you may possibly have X32 and X64 versions, so be sure to specify the correct one.)

8. Continue the installation until complete.

Option 2 - Using a network software distribution program to perform a silent installation using a command line

Most software distribution programs rely on access to a **Setup.exe** file. Follow these steps to extract the Setup.exe file necessary for installation with this type of tool:

1. Begin by double-clicking the VL*Language*VersionName*ProductEditionName*.exe file you downloaded from the Diskeeper Corporation website (this is a self-extracting file).

C:\Downloads			_	
<u>File E</u> dit <u>V</u> iew F <u>a</u> vorites <u>T</u> ools <u>H</u> elp				-
🕞 Back 🝷 🛞 🚽 🏂 🔎 Search 🞼	Folders	b 🕑	× 9	»

Diskeeper 2010 Professional.exe Diskeeper 2010 Professional f Diskeeper Corporation				
1 objects	37.8 MB	😼 My Co	omputer	

This will extract the Diskeeper software into the current folder, and if supported by the Diskeeper edition you are installing, subfolders will also be created and labeled **X86** (for Diskeeper running on Windows_© 32-bit operating systems) and **X64** (for Diskeeper editions that natively support Windows 64-bit operating systems). When the extraction process is complete, you will see something similar to this:

2. After the files have been extracted, the installation will automatically start. When you are prompted to click **Next** to install, do not continue the process. Instead, select the option to cancel the installation (unless you want to also install the software on the local system).

mier - InstallShield Wizard 🛛 🕅	
Welcome to the InstallShield Wizard for Diskeeper 2010 Pro Premier	
The InstallShield(R) Wizard will install Diskeeper 2010 Pro Premier on your computer. To continue, click Next.

o Premier – InstallShield Wi 🔀	
Cancel	

3. After canceling the installation, you will find a **Setup.exe** file in the **X86** or **X64** folders as appropriate for your installation. Use this Setup.exe file, along with any installation parameters needed, with your software distribution tool. See *How do I*

install Diskeeper remotely? in the Diskeeper Help for a list of available installation parameters.

Option 3 - Creating an Administrative Install (e.g. for Active Directory[®] deployment).

Another installation option is to create an "administrative install" using a **.msi** (Microsoft® Installer) server image for installation. Follow these steps to create the .msi package for administrative installations:

1. Begin by double-clicking the

VLLanguageDiskeeperVersionNameProductEditionName.exe file you downloaded from the Diskeeper Corporation website (this is a self-extracting file).

This will extract the Diskeeper software into the current folder, and if supported by the Diskeeper edition you are installing, subfolders will also be created and labeled **X86** (for Diskeeper running on Windows[®] 32-bit operating systems) and **X64** (for Diskeeper editions that natively support Windows 64-bit operating systems). When the extraction process is complete, you will see something similar to this:

🗀 C: \Downloads		
<u>File E</u> dit <u>V</u> iew F <u>a</u> vorites	<u>T</u> ools <u>H</u> elp	a 🖉 🖉

264 X64		
X86		
Autorun.exe Autorun Diskeeper Corporation		In most cases, the "License.dal" file is embedded within the setup.exe files.
License.dal DAL File 2 KB		IF you do see the "License.dal" file in your extracted folder, make sure to include it during the installation process.
Diskeeper 2010Professi Diskeeper 2010 Professi Diskeeper Corporation	onal.exe sional f	
5 objects	38.1 MB	😼 My Computer

2. After the files have been extracted, the installation will automatically start. When you are prompted to click **Next** to install, do not continue the process. Instead, select the option to cancel the installation (unless you want to also install the software on the local system).

3. After canceling the installation, you will find a **Setup.exe** file in the **X86** or **X64** folders as appropriate for your installation. Use this file to create the **Diskeeper VersionNameProductEditionName.msi** file used for administrative installations by issuing this command at the Windows command prompt. **Note:** You must issue this command from the directory where the Setup.exe file resides, or include the path to the file in the command:

setup.exe /a

4. This command starts the creation of a server image of the Diskeeper installation. Click **Next** when the installation Welcome screen is displayed:

5. In the next window, click **Change** to specify the folder where you want the server image to be saved, then click **Install**.

Note: The location you specify must be on a network share accessible to the computers on which you are installing Diskeeper.

		Change
stall5hield	< Back Ins	ital Cancel

6. The final window confirms the operation is complete. Click **Finish** to close the window.

7. After the server image has been created, the **Diskeeper***ProductEditionName*.msi file necessary for administrative installations will be in the location you specified in the earlier step.

8. Use any software installation routine to launch the **.msi** file as you normally would adding the parameters of your choice. For example:

DiskeeperProductEditionName.msi /qn
